# Time&Attendance (2 points of entry)

**FxLock**

**PC (server)**

**Fx2000**

*12 volt*

**External power supply**

*RS 485 or Ethernet*

The server (PC), through the **FxAccessControl** application (or another application developed with FxGate SDK), controls in a centralized way the system. User enrolments can be performed through an Fx2000 scanner connected to the server. The terminals continue working even in case of interruption of network connection.

**FxLock**

*12 volt*

**External power supply**

Once a user has been authenticated, he/she can select, through the FxLock keyboard, the motive of the transit.
